-!- FUNCTION: Potent microbicidal activity, active against
-!- Staphylococcus aureus and Escherichia coli (By similarity).
-!- SIMILARITY: Belongs to the cathelicidin family.
                                                                                                                                                                                                                        ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Potential.

"sn-1,2-diacylglycerol choline- and ethanolaminephosphotransferases in
"sn-1,2-diacylglycerol choline- and ethanolaminephosphotransferases in
"sn-1,2-diacylglycerol choline- and ethanolamine of the CPT1 and EPT1
gene products.";
J. Biol. Chem. 266:4357-4365(1991).
-!-FUNCTION: Involved in protein-dependent process of phospholipid
-!-FUNCTION: Involved in protein-dependent process of phospholipid
surface. The multiple transmembrane domains and lumenal
hydrophilic domains of the ethanolaminephosphotransferase might
participate in the transport process. EPT1 catalyzes both choline-
and ethanolamine-phosphotransferase reactions.
-!-CATALYTIC ACTIVITY: CDP-ethanolamine + 1,2-diacylglycerol = CMP +
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         STRAIN-S288C / AB972;

This Swiss-Prot entry is copyright. It is produced through a collaboration

-!- SIMILARITY: Belongs to the CDP-alcohol phosphatidyltransferase

class-I family.

-!- SUBCELLULAR LOCATION: Integral membrane protein. Microsomal

inhibited by

a phosphatidylethanolamine. CATALYTIC ACTIVITY: CDF-choline + 1,2-diacylglycerol = CMP + a

:

phosphatidylcholine. COFACTOR: Phospholipid. ENZYME REGULATION: Requires a divalent cation activator, and

A Yu C., Lewis S.E., Rubin G.M., Celniker S.;
Submitted (OCT-2001) to the RBBJ/GenBank/DDBJ databases.
C. -! CATALYTIC ACTIVITY: ATP + a protein = ADP + a phosphoprotein.
C. -! SIMILARITY: Belongs to the Ser/Thr protein kinase family.

- I- FUNCTION: Selectively cleaves double-stranded DNA at the second phosphodiester bond 3' to a deoxyinosine leaving behind the intact lesion on the nicked DNA. Acts in DNA repair (By similarity).

- I- CATALYTIC ACTIVITY: Endonucleolytic cleavage at apurinic or apyrimidinic sites to products with a 5'-phosphate.

- CONTACTOR: Magnesium (By similarity).

- I- SUBCELLULAR LOCATION: Cytoplasmic (By similarity).

- I- SIMILARITY: Belongs to the endonuclease V family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             intact
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps

-1- CATALYTIC ACTIVITY: AFP + L-methionine + H(2)O = phosphate + diphosphate + S-adenosyl-L-methionine.
-1- COFACTOR: Binds 2 divalent ions, such as magnesium or cobalt, and 1 potassium ion per subunit (By similarity).
-1- PATHWAY: Activated methyl cycle.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Tetraodon nigroviridis (Green puffer).
